

# **New note (Marine Biology II) – Goldfish**

*This file was last modified on Wednesday, March 24<sup>th</sup> 2021 at 2:36 pm*

Part of the new Marine Biology phase (March 23<sup>rd</sup> 2021-present)

## **Marine Biology I: 2011-2015**

### **General notes**

Goldfish will attack smaller fish that can fit in their mouth. After about 2-3 hours, the smaller fish learn to hide, but can also be in the open without being attacked

Goldfish pee a lot more than normal fish, which raises the pH level. This can significantly decrease the chance of a snail surviving in the tank with the goldfish.

### **Feeding notes**

#### **Feeding fish**

Make sure to turn the filter off for 15 minutes while the fish eat, so the filter doesn't get clogged. The fish should only take 3 minutes to finish eating (goldfish, tetra neon, cleaner, snails)

Most fish food will work, although some fish food may cause diarrhea.

Goldfish take about 3 minutes to finish eating food

Goldfish variation: common for white goldfish: 2 red eyes, uncommon for white goldfish: 1 red eye, 1 blue eye

### **Life expectancy**

Average goldfish life expectancy: 4-10 years

Black Moore Goldfish life expectancy: 4-6 years

Normal (unknown) goldfish life expectancy: 4-10 years

White goldfish life expectancy: 2-8 years

### **File info**

File version: 1 (Wednesday, March 24<sup>th</sup> 2021 at 2:36 pm)
