

New note (Marine Biology II) – Filter

This file was last modified on Wednesday, March 24th 2021 at 2:31 pm

Part of the new Marine Biology phase (March 23rd 2021-present)

Marine Biology I: 2011-2015

Notes

Filters actually work

Filters have a piece on the tube that prevents fish from getting sucked in

A bigger filter is required for a bigger tank (a 10 gallon filter does not work very well on a 29 gallon tank, a 30-60 gallon filter works extremely well on a 29 gallon tank)

Feeding notes

Feeding fish

Make sure to turn the filter off for 15 minutes while the fish eat, so the filter doesn't get clogged. The fish should only take 3 minutes to finish eating (goldfish, tetra neon, cleaner, snails)

File info

File version: 1 (Wednesday, March 24th 2021 at 2:31 pm)

File history

Version 1 (Wednesday, March 24th 2021 at 2:31 pm) {

Changes:

Started the file

Added the title section

Added the notes section

Added the feeding notes section

Added the file info section

No other changes in version 1 }
